

Araca Insights®

Data analysis software for your Araca polishers and cleaners

A desktop application that turns the runs coming off your polisher or scrubber into something you can work with. It runs entirely on your own computer.

Three packages

Package	For	What you get
Araca Insights® Essential	APD-800 Prime® and RDP-500® polishers	Import, annotate, visualize and analyze your polishing runs. Run Playback, Correlations and Reports. Every project keeps its runs, settings, annotations and results in one folder that reopens in a single click.
Araca Insights® Advanced	APD-800 Prime® and RDP-500® polishers	Everything in Essential. Compare shows how two pads, slurries, conditioners or wafers differ, using only runs made under the same process conditions. An AI Agent answers questions about your data and predicts removal rate for conditions you have not run yet.
Araca Insights® Clean	PCC-300® PVA brush scrubbers	Import, annotate, visualize and analyze your brush scrubbing runs. Shear Force & COF traces and FFT, organized the same way, project by project.

Pricing

Choose a term. The longer the term, the less your annual payment. Every price below covers one instrument and is quoted in US dollars. Universities and non-profit research institutions receive a 10 percent discount.

Package	1 year	3 years	5 years	Lifetime
Araca Insights® Essential	\$75,000	\$187,500	\$262,500	\$375,000
Araca Insights® Advanced	\$125,000	\$312,500	\$437,500	\$625,000
Araca Insights® Clean	\$50,000	\$125,000	\$175,000	\$250,000
You save, per year	—	17%	30%	50%

A five-year license costs 30 percent less per year than having to renew it annually. A lifetime license costs about half, measured against a ten-year working life, and you'll never see another invoice for it.

Your data never leaves your lab

Araca Insights® runs entirely on your own computer. No cloud account, no server to log into, nothing sent back to us. Your run conditions, your recipes and your results stay on your machine and inside your network.

That includes the AI. The Advanced package carries its language model on board and does all of its thinking locally, so asking it about a proprietary slurry or an unreleased pad sends nothing anywhere. Very few AI tools can say that.

No security review to get through, no VPN, no dependence on your connection. It works in an air-gapped lab, in a basement with no signal, and on the day your network goes down.

Every license includes

- Use of the software on one instrument (polisher or cleaner), installed on any computer in your lab that you use to work with that instrument's data.
- Every update we release for your package during the term, at no extra charge.
- Technical support by phone or e-mail, direct from the people who built the software.

The lifetime license

One payment, and the software is yours for as long as that instrument (polisher or cleaner) stays in service. Updates and support are included throughout and there is nothing further to pay.

Araca tools last. Most are still running well past fifteen years, and one of ours has been in service for more than eighteen. Over a working life like that, a lifetime license is by a wide margin the cheapest way to own the software.

Adding Advanced later

You can move from Essential to Advanced at any time. You pay the difference between the two packages, and your license keeps the end date it already had. Upgrade part way through and you pay only for the months still remaining.

Upgrade	1 year	3 years	5 years	Lifetime
Essential to Advanced	\$50,000	\$125,000	\$175,000	\$250,000

Prices shown are for a full term. A mid-term upgrade is prorated to the months remaining.

With a new tool

New APD-800 Prime®, RDP-500® and PCC-300® tools can come with Araca Insights® included. Your quotation lists the package and term that come with your tool.

Renewing

Renew at any time, for any term. A license that is not renewed simply stops working; pick it up again whenever you are ready.
